## Wowrack interconnect revision

This document serves as a revision to the Wowrack existing interconnect with the SIX, dated 10th July 2014, pending approval by the SIX Board. We are providing the information based on the SIX policies and rules at <https://www.seattleix.net/rules>.

Wowrack has expanded its Datacenter facility on the 3rd floor at Intergate West in Tukwila, and we are providing Wowrack customers with the capability to peer with the SIX at 1Gbps on this floor.

Additionally, Wowrack has a Force10 S25 with a 10Gbps fiber cross-connect to the existing IGW transport switch, and it has a dedicated uplink to the Wowrack internal NOC network for management access.

SIX policy and rules will be enforced on this switch. Ports will err-disable for the following reasons:

- Exceeding a maximum MAC count of one MAC address per VLAN
- BPDUs

All administrative and management control of the switch is managed by the Wowrack NOC at [noc@wowrack.com](mailto:noc@wowrack.com) - 206-522-4402.

Attached to this document is the revised interconnect network diagram.
